## Pluto 6 - Rapid Flash 256MB Flash Memory Expansion Card

Contact us for an  
evaluation sample!

### Greatly extended performance capability

Specially designed to extend and enhance the performance and capability of Heber's internationally successful high-performance Pluto 6 embedded control boards, this new powerful flash memory expansion card can accelerate game data transfer speeds by up to 7 times the speed of conventional graphics transfers, thus greatly accelerating game-load times. This massive performance upgrade now enables the powerful and highly competitive Pluto 6 to be the platform of choice in all multi-game compendium games machines.

### Added functionality

Featuring 256MB of high speed flash memory, expandable to over 2GB, **Rapid Flash** includes 512KB of battery-backed SRAM with extended hold-up time and battery threshold monitoring circuitry that is fully compatible with GLI 11. Both bootable and re-programmable by Compact Flash card, **Rapid Flash** is a rugged and reliable addition to the Pluto 6 family that dramatically extends the useful range and capability of Pluto 6.

Accelerated game-load times

Rugged and reliable construction. Slim and neat integration

### Key features

- 256MB flash as standard
- Expandable to 2GB
- Battery backed 512KB SRAM
- Battery threshold monitor
- High speed data transfer
- Programmable via CF
- Compatible with GLI 11 standards
- Rugged connectors
- Robust mounting

### Ideal for...

- Multi-game compendiums
- Reduced loading times
- Vending & kiosk use

### The Heber advantage

When you buy a Pluto 6 Rapid Flash from Heber you benefit from:

- 25 years industrial design experience
- Compliance with worldwide industrial standards
- Our team of dedicated specialist engineers
- Bespoke industrial control designs
- Free customer support
- Total product dependability
