Release starts...

Heber, world recognised designers and manufacturers of electronic gaming control systems, will be exhibiting their extensive range of controllers including the next generation Pluto system at ICE 2008.

The entirely new controller has been developed by Heber and will be exclusively demonstrated to select customers at the London show.

"We've had huge success with the Pluto range of embedded control systems," said John Malin, Sales Manager. "The new Pluto controller will bring even further benefits to our customers and is a superb addition to Heber's increasing range of industry leading controllers".

In a competitive marketplace, it is Heber's core values that make them stand out from the crowd. Heber has a large product stockholding with immediate availability, longevity of supply and individually tests every control system that is sold. Heber's Development Kits are of great benefit to gaming developers as they speed up development time and reduce the time to market.

Heber will also be demonstrating its recently launched Axis 945 PC gaming control system and XLine X15 USB PC gaming I/O peripheral at ICE 2008. Heber's Pluto range of embedded control systems, Axis 945 Slimline together with XLine X10i and X20 USB peripheral I/O boards and development kits will also be on show.

Heber will be exhibiting on stand number 4165 at ICE 2008, Earls Court, London on the 22nd - 24th January.

For further information about Heber Limited and all of its gaming control systems visit www.heber.co.uk or phone +44 (0) 1453 886000.

Editor's notes

Heber is the leading designer and manufacturer of electronic control systems for the gaming and amusement industries.

With over 24 years experience within the market place Heber has created the Pluto range of Embedded Reel Control Systems, which are in use with major manufacturers in over 500,000 machines worldwide. Pluto 8 is the latest addition to the Pluto family and provides faster performance, more memory, integrate dual video on board, and advanced security features.

The Calypso range of video cards have been designed to interface with Pluto 5, Pluto 5 Casino and Pluto 6 and add high performance graphics for gaming applications. The latest version of the Pluto 6 board enables dual video performance when two Calypso 32 video cards are fitted.

The Axis range of high performance PC based multimedia video control systems, including the new Axis 945, Axis 945 DV and Axis 945 SL systems provide high levels of security and multiple I/O connectivity options.

The XLine range of X10i, X15 and X20 peripheral boards complement any PC based platform that has a USB port, including Axis 945 range, adding the control, I/O and security needed in modern amusement or gaming machines.

Heber produces Development Kits for its Pluto, Axis and XLine controllers. The Development Kits provide an ideal test environment for gaming system developers and speed up development while reducing the time-to-market.

Heber products can be ordered from its Chalford, Stroud office in the UK or from its distributors in Buenos Aires, São Paulo and Sydney.
