Release starts...

Timed to coincide with the ENADA 2009 show in Rimini, Heber Limited today announces the launch of a new gaming control system, designated **Pluto Comma 6a**, that is specifically engineered and approved for the Italian gaming market.

The new **Pluto Comma 6a** control system is a fully integrated single-platform package that combines Heber's internationally acclaimed P6 embedded controller with a JAMMA connector mounted in a protective metal case. Together they interface seamlessly with the Italian state's AAMS* smart card and network that monitor revenue due to the state from the Italian gaming machine operators.

Scheduled for full production during late spring of 2009, Pluto Comma 6a offers game software developers the opportunity to roll out their exciting new game releases or current favourites into the Italian market without delay.

To take full advantage of the opportunities presented by the Italian market, Heber Limited has developed a strategic relationship with specialist gaming system provider White Label International (tel: +44 (0) 7590 105811) who are particularly experienced at developing and supporting Comma 6a specific solutions. Through this relationship project partners can also secure introductions to new commercial contacts and distribution opportunities so as to become active in the market within a short time.

...release ends.

Editor's notes

Heber is the leading designer and manufacturer of electronic control systems for the gaming and amusement industries.

With over 24 years experience within the market place Heber has created the Pluto range of Embedded Reel Control Systems, which are in use with major manufacturers in over 500,000 machines worldwide. Pluto 8 is the latest addition to the Pluto family and provides faster performance, more memory, integrate dual video on board, and advanced security features.

The Calypso range of video cards have been designed to interface with Pluto 5, Pluto 5 Casino and Pluto 6 and add high performance graphics for gaming applications. The latest version of the Pluto 6 board enables dual video performance when two Calypso 32 video cards are fitted.

The Axis range of high performance PC based multimedia video control systems, including the new Axis 945, Axis 945 DV and Axis 945 SL systems provide high levels of security and multiple I/O connectivity options.

The XLine range of X10i, X15 and X20 peripheral boards complement any PC based platform that has a USB port, including Axis 945 range, adding the control, I/O and security needed in modern amusement or gaming machines.

Heber produces Development Kits for its Pluto, Axis and XLine controllers. The Development Kits provide an ideal test environment for gaming system developers and speed up development while reducing the time-to-market.

Heber products can be ordered from its Chalford, Stroud office in the UK or from its distributors in Buenos Aires, São Paulo and Sydney.
