# XTouch Through glass switching for improved player interaction

**Available to buy online!**

### A through glass touch button for gaming controllers

XTouch offers game developers and manufacturers the ability to provide improved game play and player interaction. In machines that have a front panel, the XTouch technology can be used to seamlessly replace mechanical switching, removing the need to drill holes in the glass. This allows the switch icons to be integrated into the artwork on the glass or Perspex front, rather than breaking up and detracting from the graphic theme that occurs with standard switches.

### Versatile and reliable technology

The XTouch technology is mounted behind the wipe-clean glass or Perspex sheet, able to be wiped clean, and protected from water ingress. Available in two off-the-shelf sizes, XTouch is ideal for gaming and amusement machines with a new capability to have hidden switches which can appear depending on the game play. It can also be customised to a range of different sizes, this ensures a bespoke design that is perfect for a wide range of switch applications.

### A modern way to play

LEDs incorporated within XTouch provide a spectacular backlight to attract the attention of players, whilst the touch buttons present improved ways to play in a similar manner to a smart phone screen.

**Key features**

- Fully integrates with graphic theme
- Touch sensitive
- LED backlight
- Range of sizes
- Protected from water ingress
- A new capability for hidden switches

**Ideal for...**

- Replacing mechanical switches
- Amusement machines
- AWP machines
- Use with all Heber gaming control boards

**The Heber advantage**

When you buy XTouch from Heber you benefit from:

- 25 years gaming industry expertise
- Free, flexible customer support
- Compliance with worldwide gaming standards
- Our team of dedicated specialist engineers

## XTouch technical specifications

### Power

+ 12V power supply

### Backlight Sizes

XTouch-L, 45mm x 22 mm

XTouch-S, 22mm x 22 mm

### Backlight Control

Single Input

- Compatible with main controller digital output

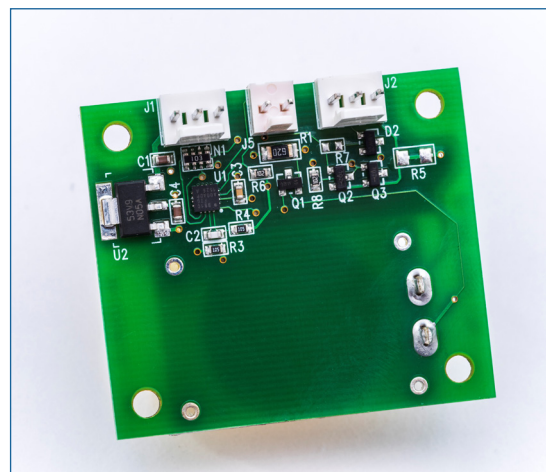

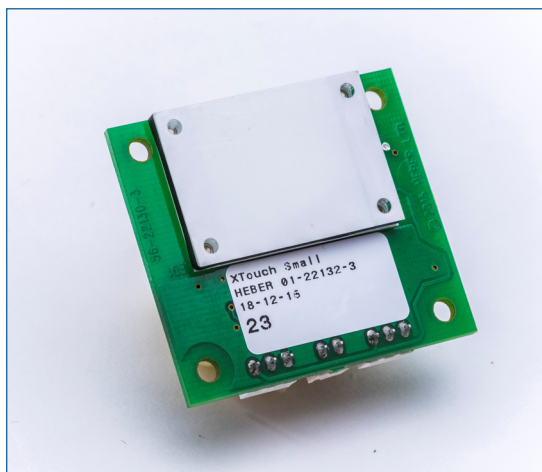

### Sense Output

Single Open Drain Output

- Compatible with main controller digital input

### Heber gaming controllers

Fully compatible with all Heber gaming control boards
